RELEVANT PROJECTS

Time Card Software Solution: Personalized software solution to track employee hours in decimal time and calculate their pay based on hours and wage. Designed, tested, developed, and deployed using JS, HTML5, CSS, and Netlify providing a user-friendly solution for time-tracking.

Dockerized MySQL Backend Setup: Experience using docker compose file to setup phpmyadmin client and mysql server database setup. Creating API backend endpoints.

Report Generator using Pandas Dataframe Slicing: uses a low-level dynamic coding. This means that this script can generate a report containing selected data from any "flat" excel(CSV) file, provided that (1) The file can be read using Panda's read_csv function. (2) The file contains data that can be used to create a "clean" DataFrame object.
